COMPANY DESCRIPTION
SAP’s vision is to help the world run better and improve people’s lives. As the cloud company powered by SAP HANA®, SAP is a market leader in enterprise application software, helping companies of all sizes and industries run better. SAP empowers people and organizations to work together more efficiently and use business insight more effectively. SAP applications and services enable our customers to operate profitably, adapt continuously, and grow sustainably.

At SAP, we believe in the power of collaboration and empower our employees to perform at their best in an environment that encourages free and open expression of ideas. You’ll work alongside creative thinkers who share your interests, while turning big ideas into reality for our customers. With innovative job training, mentors to help you grow, and the flexibility to balance your work and personal life, you’ll be able to get more out of your career. It’s no wonder that some of the sharpest minds from around the world are working for a company that is consistently recognized as a global top employer.
Now it’s your turn to take the next step and help make the world Run Simple.

ABOUT SAP

As market leader in enterprise application software, SAP helps companies of all sizes and industries run better. From back office to boardroom, warehouse to storefront, desktop to mobile device – SAP empowers people and organizations to work together more efficiently and use business insight more effectively to stay ahead of the competition.

PURPOSE AND OBJECTIVES

Our SAP S/4 Master Data Management development team is a strategic development entity within SAP, developing products for our Enterprise Information Management (EIM) solutions, combining software engineering excellence with thought leadership and entrepreneurial spirit. Across multiple locations and by building on strong teams, we implement state-of-the-art master data solutions in close collaboration with customers and partners in industry as well as with other SAP units.

SAP Master Data Governance (MDG) provides central ownership of master data in line with a company’s business rules and business processes. MDG delivers domain-specific, out-of-the-box applications as well as a framework for custom-defined master data. MDG offers change request-based processing of master data
with an integrated workflow including staging, approval, activation, and distribution to all systems. Within SAP MDG, you can combine consolidation and central governance to support various master data management scenarios, such as initial load of master data as a starting point for central governance, consolidation of master data after mergers and acquisitions, and also combinations of both scenarios, where you retain de-central ownership of master data in some parts of the company while centralizing master data ownership in other parts.

Within our team, new Quality associates will go through an individually tailored training program and will be supported directly on the job by an experienced Quality Expert. Furthermore, we foster career development from the very beginning and as an ongoing activity, such as under our Early Talent program.

Within our team, we practice a trust-based working model.

EXPECTATIONS AND TASKS

As a member of the S/4 Master Data Management development unit, you will be working as Quality associate within highly motivated and empowered scrum teams following the Lean Development Model. In your daily work, you will have the chance to develop in various directions, such as in business knowledge and technology as well as communication and cross-topic responsibility.

As a team player you take over responsibility for quality assurance as your familiar field of activity, taking into account the cloud mindset.

You will support various scrum teams and carry out end-to-end quality activities, like:

Collaboration with product owners and developers to understand user point of view and requirements for testing
Contribute to design and implementation of new functional tests based on latest tools and frameworks
Assure high quality via ongoing automated and manual tests
Learning new technologies and implementing prototypes
Configure development and test landscapes using Config. Guides
Test case creation, testing and reporting of incidents

You will contribute to the team spirit by supporting an environment of continuous learning, by exchanging ideas and thoughts, and by embracing a culture of innovation. This is an ideal role for a very focused and ambitious individual who is able to work in a highly collaborative environment.

EDUCATION AND QUALIFICATIONS / SKILLS AND COMPETENCIES

University degree in computer science, mathematics, engineering or a related field

Required skills

Proven programming skills and experience in implementing automated tests
Excellent German and English language skills - written and verbal
Experience with Agile and Scrum Methodology
Knowledge and hands-on experience in object-oriented programming and in design patterns
Ability to independently identify and solve problems at hand
Strong analytical skills, as well as excellent interpersonal and communication skills
Interest in learning new technologies and in personal growth
High ambition, drive for and focus on results and execution
Customer-oriented work attitude
Intercultural awareness
Preferred skills:
Working knowledge in all aspects of the software development lifecycle
Background in using master data objects in standard business processes

WORK EXPERIENCE
We are looking for Graduates or Young Professionals with 0-2 years of experience

LOCATION
Walldorf, Germany

EXPECTED TRAVEL
0 - 10%
