Saarland University is a campus university with an international reputation for research excellence, particularly in computer science and in the life sciences and nanosciences. The university is also distinguished by its close ties to France and its strong European focus. Around 17,000 students, studying over one hundred different academic disciplines, are currently enrolled at Saarland University. Saarland University is officially recognized as one of Germany's family-friendly higher-education institutions and with a combined workforce of more than 4000 it is one of the largest employers in the region.

The research group for Integrative Cellular Biology and Bioinformatics is inviting applications for the following positions commencing at the earliest opportunity.

Academic research assistant (m/f/x)

Reference number W2067, salary in accordance with the German TV-L salary scale¹, pay grade: E13, employment: initially for 1 year with the option for extension, 75 % of standard working time. There are two positions to be filled.

Workplace/Department:

The state of each cell is regulated by the complex interplay of many different **epigenetic** mechanisms. This has crucial implications for normal organism development and disease. Modern sequencing technology facilitates the genome-wide characterization of the underlying regulatory factors.

The recently founded group for *Integrative Cellular Biology and Bioinformatics* (<https://icb.uni-saarland.de/>) is developing and applying computational methods to dissect these molecular mechanisms that govern cell state in development and disease. This requires the analysis and integration of large-scale, multi-omics datasets, and we engage in interdisciplinary collaborations between molecular biology and computer science to drive cutting-edge research at the intersection of epigenomics, biostatistics, algorithms and machine learning.

We are looking for motivated and creative people to join our team. **The opportunity to pursue a PhD is provided, given that all requirements are met.**

Job requirements and responsibilities:

- Development and application of statistical and machine learning methods for the analysis and integration of *-omics data (including Bisulfite-seq, ATAC-seq, RNA-seq) at the bulk and single-cell level
- Development of usable software for the interpretation of large biological datasets

¹ TV-L = collective agreement on remuneration of public sector employees in the German *Länder*

The pay grade assigned to an employee depends on their professional qualifications and the number of years of service. Each pay grade is further subdivided into levels. Entry-level employees with no previous experience will initially be assigned a level 1 rating. After one year at level 1 of the E10 pay grade, an employee will move up to level 2. After a further two years, the employee will move to level 3, etc.

- Close collaboration with other research groups at the interface of molecular biology and computer science

Your academic qualifications:

- Completed scientific university studies in bioinformatics, computer science, molecular biology or a related discipline.

The successful candidate will also be expected to:

- Proficient knowledge in programming, software development and algorithms (R / Python or similar)
- Experience with UNIX-based operating systems and their CLI tools is an advantage
- Experience in statistics and machine learning is desired, but not required
- Experience with *-omics data analysis and experience with single-cell analyses are desired, but not required
- Independently work on novel and complex topics
- Have an expressed interest in the field of epigenomics and gene regulation
- Teach in the Bachelor & Master bioinformatics and biology programs and co-supervise final theses
- Have excellent verbal and written communication skills in the English language (German is not a requirement)

What we can offer you:

- A flexible work schedule allowing you to balance work and family
- A broad range of further education and professional development programmes
- An occupational health management model with numerous attractive options, such as our university sports programme
- Supplementary pension scheme (RZVK)
- Discounted tickets on local public transport services ('Jobticket')

We look forward to receiving your **application** (including a letter of motivation, a current CV, references, certificates of completed degrees and transcripts of completed university courses).

Please quote **reference number W2067** when applying. Applications must be received by no later than **31 January 2023** and should be sent to the following address:

Universität des Saarlandes
Herr Jun.-Prof. Dr. Fabian Müller
Integrative Cellular Biology and Bioinformatics

Email: fabian.mueller@uni-saarland.de

If you have any **questions**, please contact us by Email for assistance.

In accordance with the objectives of its equal opportunities plan, Saarland University seeks to increase the proportion of women in this field. Qualified women candidates are therefore strongly encouraged to apply. Preferential consideration will be given to applications from disabled candidates of equal eligibility. The successful candidate has the option of choosing to work part-time in this position.

Pay grade classification is based on the particular details of the position held and the extent to which the applicant meets the requirements of the pay grade within the TV-L salary scale.

When you submit a job application to Saarland University you will be transmitting personal data. [Please refer to our privacy notice for information on how we collect and process personal data in accordance with Art. 13 of the Datenschutz-Grundverordnung.](#) By submitting your application you confirm that you have taken note of the information in the Saarland University privacy notice.
