The Internet of Things is all about innovation and so is Cumulocity. We are dedicated to state-of-the-art software technologies, and we live agile development and DevOps.

You prefer automated deployment over installation manuals? Same here. You know how to keep a server cluster in the cloud happily computing at high performance? Good. We should talk.

**Senior DevOps Engineer (m/f)**

**What you will do**
- Develop our continuous integration, deployment and monitoring infrastructure.
- Develop and maintain our platform-as-a-service infrastructure.

**What you will get**
- The best of both worlds: a startup atmosphere backed by an established parent company.
- Work with the latest technologies in today’s most exciting domain, the Internet of Things.
- Sane working hours through Scrum.
- 30 days of holiday.
- Individual development planning and continuous learning opportunities.
- If you don’t commute by car, we support your bike or public transport tickets.

**What you need to bring along**
- Strong cloud system architecture background (load balancing, clustering on web and database server level, cloud infrastructures).
- Solid practical experience in working with PaaS technologies (Docker, Kubernetes).
- Solid practical experience in continuous integration and continuous deployment (SCM processes, CI tools, deployment and configuration management tools such as Chef or Ansible).

Sounds like a great package?
