The Internet of Things is all about innovation and so is Cumulocity. We are dedicated to state-of-the-art software technologies, and we live agile development and DevOps.

Do you have both broad and deep technical know-how of cloud platforms? Can you convey the benefits of a new technology to customers and the idea of a new feature to developers?

Join our team as a:

**Software Architect** (m/f)

**What you will do**
- Technically lead the product implementation.
- Work closely with our product management and development team to specify and implement exciting new features.
- Drive Cumulocity’s performance to the next level.
- Design easy-to-use APIs and maintain the architectural integrity of the product.

**What you will get**
- The best of both worlds: a startup atmosphere backed by an established parent company.
- Work with the latest technologies in today’s most exciting domain, the Internet of Things.
- Sane working hours through Scrum.
- 30 days of holiday.
- Individual development planning and continuous learning opportunities.
- If you don’t commute by car, we support your bike or public transport tickets.

**What you need to bring along**
- A master’s degree in Computer Science and several years of work experience in software development.
- Excellent technical knowledge of modern cloud web applications, Java stacks and database systems.
- Abstraction skills to turn customer requirements into new product features and to choose the right architecture for implementing them.
- Ideally knowledge of the Internet of Things and industrial automation technologies.
- Ideally experience in leading developers.

Sounds like a great package? Then send us your application to:
