The Internet of Things is all about innovation and so is Cumulocity. We are dedicated to state-of-the-art software technologies, and we live agile development and DevOps.

You have a strong and broad IT background? You understand the bigger picture and communicate easily with customers? This might be something for you:

**Solution Architect Internet of Things (m/f)**

**What you will do**
- Help our international customers and partners to create powerful Internet of Things solutions with our cloud platform.
- Support our sales team with cost estimates, project planning and rollouts.
- Develop customer solutions: Define requirements, follow them up during the implementation phase and ensure a high-quality delivery.

**What you will get**
- The best of both worlds: a startup atmosphere backed by an established parent company.
- Work with the latest technologies in today’s most exciting domain, the Internet of Things.
- Sane working hours through Scrum.
- 30 days of holiday.
- Individual development planning and continuous learning opportunities.
- If you don’t commute by car, we support your bike or public transport tickets.

**What you need to bring along**
- A master’s degree in computer science and at least two years of experience in solution development. Alternatively, at least five years of experience in software and solution development.
- Excellent communication skills; fluent in English, German and ReST.
- Practical experience in system engineering and cloud platforms.
- Ideally knowledge of IoT technologies, fieldbus protocol, industrial automation, leading developers.

**Sounds like a great package?**
