The Internet of Things is all about innovation and so is Cumulocity. We are dedicated to state-of-the-art software technologies, and we live agile development and DevOps.

You love spotting big, fat bugs and wiping them out? You enjoy ensuring high quality standards in a rapidly growing and agile environment? Good. We should talk.

Test Engineer / QA (m/f)

What you will do

• Work with the development teams to turn user stories into testable features with well-defined acceptance criteria.
• Implement automated user interface tests and functional tests to ensure continuous high quality of the sprint output.

What you will get

• The best of both worlds: a startup atmosphere backed by an established parent company.
• Work with the latest technologies in today’s most exciting domain, the Internet of Things.
• Sane working hours through Scrum.
• 30 days of holiday.
• Individual development planning and continuous learning opportunities.
• If you don’t commute by car, we support your bike or public transport tickets.

What you need to bring along

• Knowhow in agile testing, test design and test specification.
• Practical experience in automated functional testing using tools such as Cucumber and Protractor.
• Knowledge of software development in Java or JavaScript and using REST APIs.
• Ideally experience in automated non-functional testing (scalability, performance, security, ...).
• Ideally an ISTQB certification and experience in testing standards and quality metrics as well as user experience testing.

Sounds like a great package?
