The Internet of Things is all about innovation and so is Cumulocity. We are dedicated to state-of-the-art software technologies, and we live agile development and DevOps.

You understand both the user’s point of view and the technical background? You enjoy helping people to unlock the full potential of state-of-the-art cloud solutions? Then join us as a:

**Technical Support Engineer** *(m/f)*

**What you will do**

- Assist our international customers in the use of Cumulocity applications.
- Support developers in the use of the Cumulocity APIs and software libraries.
- Contribute to the quality assurance of Cumulocity features.

**What you will get**

- The best of both worlds: a startup atmosphere backed by an established parent company.
- Work with the latest technologies in today’s most exciting domain, the Internet of Things.
- Sane working hours through Scrum.
- 30 days of holiday.
- Individual development planning and continuous learning opportunities.
- If you don’t commute by car, we support your bike or public transport tickets.

**What you need to bring along**

- Good knowledge of ReST and the ability to use ReST from at least one programming or scripting language.
- Good communication skills in both English and German.
- Basic knowledge of Linux and an understanding of network communication (TCP, HTTP).
- Ideally some practical experience in software development and testing.

Sounds like a great package? Then send us your application to:
